

Watch out for
night-time obstacles.

LUNETTA® LED night light with
brightness sensor

SEE THE WORLD IN A NEW LIGHT

Plug in and forget

LUNETTA® LED is a new compact plug-in night light featuring a modern light emitting diode and integrated brightness sensor that switches the light on automatically at night and off again at dawn.

The high-quality OSRAM LED has a very long life and very low power consumption and provides highly visible but subdued yellowish white light. The sturdy head can be rotated through 360° to shine light where it's needed, and the prismatic cover ensures the light is distributed evenly.

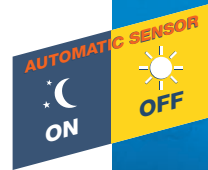

Safely through the night

LUNETTA® LED can be used as an energy-saving night light to provide comfort and it can also serve as a light to help you or your loved ones find their way round at night. It is ideal for bedrooms, bathrooms and corridors, providing enough light to avoid obstacles and find light switches.

Small children are much happier to go to sleep with a light on, and will not be afraid if they wake up in the middle of the night. Sleepwalkers, large and small, will be able to find their way more easily to the bathroom or fridge – without risking “accidents” or waking the rest of the family by making a noise or putting on bright lights.
